

1 **In the Claims**

2 Claims 24 and 62 are amended.

3 Claims 1-23, 37-47, 54-57, 61, 63-64 are canceled without prejudice.

4 Claims 24-36, 48-53, 58-60, and 62 remain in the application and are listed  
5 below:

6 **1.-23. (Canceled).**

7  
8  
9 **24. (Currently Amended)** A system for determining context  
10 comprising:

11 one or more computer-readable media;

12 a first hierarchical tree structure having multiple nodes associated with a  
13 first context, wherein the first hierarchical tree structure resides on the one or more  
14 computer-readable media;

15 at least one second hierarchical tree structure having multiple nodes  
16 associated with a second context, wherein the second hierarchical tree structure  
17 resides on the one or more computer-readable media; and

18 at least one node from the at least one second hierarchical tree structure  
19 being linked with one node on the first hierarchical tree structure by a link that is  
20 configured to enable a complete context to be derived from the first and second  
21 contexts, individual nodes having unique IDs that can serve as a basis by which  
22 attributes can be assigned to goods or services,  
23  
24  
25

1 said multiple nodes comprising parent and children nodes, at least some of  
2 the parent nodes and their associated children nodes having IDs that are unique for  
3 the associated node.  
4

5 **25. (ORIGINAL)** The system of claim 24, wherein the first and second  
6 contexts comprise a location context.  
7

8 **26. (ORIGINAL)** The system of claim 24, wherein the nodes of the first  
9 hierarchical tree structure comprise geographical divisions of the Earth.  
10

11 **27. (ORIGINAL)** The system of claim 26, wherein the nodes of the at  
12 least one second hierarchical tree structure comprise physical and/or logical  
13 entities.  
14

15 **28. (ORIGINAL)** The system of claim 24, wherein the first and the at  
16 least one second hierarchical tree structures comprise a plurality of attributes, one  
17 of which comprising information that pertains to the tree with which the node is  
18 associated.  
19

20 **29. (ORIGINAL)** The system of claim 28, wherein the information  
21 comprises a universal resource locator (URL).  
22  
23  
24  
25

1           **30. (ORIGINAL)** The system of claim 24 further comprising one or  
2 more goods or services associated with one or more of the nodes of the at least one  
3 second hierarchical tree structure.  
4

5           **31. (ORIGINAL)** The system of claim 24, wherein the first hierarchical  
6 tree structure comprises a standardized view of the Earth, and the at least one  
7 second hierarchical tree structure comprises an organization-specific view of at  
8 least a portion of the Earth, the organization-specific view comprising a  
9 physical/logical entity that links into specific portions of the Earth.  
10

11  
12           **32. (ORIGINAL)** The system of claim 31, wherein the organization-  
13 specific view has no context outside of the organization.  
14

15           **33. (ORIGINAL)** The system of claim 24, wherein the computer-  
16 readable media is embodied on a mobile computing device.  
17

18  
19           **34. (ORIGINAL)** The system of claim 24, wherein the computer-  
20 readable media is embodied on a desktop device.  
21

22           **35. (ORIGINAL)** The system of claim 24, wherein the computer-  
23 readable media is embodied a handheld mobile computing device.  
24  
25

1           **36. (ORIGINAL)** The system of claim 24, wherein the computer-  
2 readable media is accessible to a computing device via the Internet.

3  
4           **37.-47. (Canceled).**

5  
6           **48. (PREVIOUSLY PRESENTED)** One or more computer-readable  
7 media having computer-readable instructions thereon which, when executed by a  
8 computing device, cause the computing device to:

9           access first and second hierarchical tree structures, each tree structure  
10 having multiple nodes, the nodes of the first hierarchical tree structure being  
11 associated with a first location context, the nodes of the second hierarchical tree  
12 structure being associated with a second location context, at least one node of the  
13 second hierarchical tree structure being linked with a node of the first hierarchical  
14 tree structure; and  
15

16           traverse at least one node of each tree structure to derive a location context,  
17 at least one node in a traversal path that leads to a root node of the second  
18 hierarchical tree structure being linked with a node of the first hierarchical tree  
19 structure, individual nodes having unique IDs that can serve as a basis by which  
20 attributes can be assigned to goods or services, said multiple nodes comprising  
21 parent and children nodes, at least some of the parent nodes and their associated  
22 children nodes having IDs that are unique for the associated node.  
23  
24  
25

1           **49. (ORIGINAL)** The one or more computer-readable media of claim  
2 48, wherein the computing device automatically determines its location context.

3  
4           **50. (ORIGINAL)** The one or more computer-readable media of claim  
5 48, wherein the computing device is a handheld computing device.

6  
7           **51. (ORIGINAL)** The one or more computer-readable media of claim  
8 48, wherein the computing device is a mobile computing device.

9  
10           **52. (ORIGINAL)** The one or more computer-readable media of claim  
11 48, wherein the computing device is a desktop device.

12  
13           **53. (ORIGINAL)** The one or more computer-readable media of claim  
14 48, wherein the computing device is a handheld computing device that  
15 automatically determines its location context.  
16

17  
18  
19           **54.-57. (Canceled).**

20  
21           **58. (PREVIOUSLY PRESENTED)** A computer-implemented method  
22 of building context-aware data structures comprising:  
23 receiving input from a source that specifies information pertaining to  
24 physical and/or logical entities;  
25

1 processing the information to define a hierarchical tree structure having a  
2 context, the tree structure comprising multiple nodes each of which represent a  
3 separate physical or logical entity, said multiple nodes comprising parent and  
4 children nodes, at least some of the parent nodes and their associated children  
5 nodes having IDs that are unique for the associated node;

6 linking at least one of the multiple nodes to a node of another tree structure  
7 having a context and multiple nodes that represent physical and/or logical entities,  
8 individual nodes having unique IDs that can serve as a basis by which attributes  
9 can be assigned to goods or services,  
10

11 the tree structures being configured for traversal in a manner that enables  
12 context to be derived from one or more of the nodes.  
13

14 **59. (ORIGINAL)** The computer-implemented method of claim 58,  
15 wherein the context that is derived comprises a location context.  
16

17  
18 **60. (ORIGINAL)** One or more computer-readable media having  
19 computer-readable instructions thereon which, when executed by a computing  
20 device, cause the computing device to implement the method of claim 58.  
21

22 **61. (Canceled).**  
23  
24  
25

1           **62. (Currently Amended)** A system for determining context  
2 comprising:

3           one or more computer-readable media;

4           a first hierarchical tree structure having multiple nodes associated with a  
5 first context, wherein the first hierarchical tree structure resides on the one or more  
6 computer-readable media;

7           at least one second hierarchical tree structure having multiple nodes  
8 associated with a second context, wherein the second hierarchical tree structure  
9 resides on the one or more computer-readable media; and

10           at least one node from the at least one second hierarchical tree structure  
11 being linked with one node on the first hierarchical tree structure by a link that is  
12 configured to enable a complete context to be derived from the first and second  
13 contexts, individual nodes having unique IDs that can serve as a basis by which  
14 attributes can be assigned to goods or services,  
15

16           said multiple nodes comprising parent and children nodes, at least some of  
17 the parent nodes and their associated children nodes having IDs that are unique for  
18 the associated node;  
19

20           wherein the nodes of the first hierarchical tree structure comprise  
21 geographical divisions of the Earth;

22           wherein the first and the at least one second hierarchical tree structures  
23 comprise a plurality of attributes, one of which comprising information that  
24 pertains to the tree with which the node is associated.  
25

1  
2 **63.-64. (Canceled).**  
3  
4  
5  
6  
7  
8
